PROFESSIONAL SUMMARY

Full Stack Developer with nearly 5 years building end-to-end web products with React, Next.js, and Node.js, specialized in AI automation and real-time systems. Implemented an AI-powered dashboard at an immigration law firm that reduced internal processing time from 6 months to under 1 week. Technically led the front-end of a SaaS in production and a team of 3 developers, increasing productivity by 20%.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL, HTML5, CSS3

Frontend: Next.js, React.js, Redux, TailwindCSS, MUI, Mantine

Backend: Node.js, Express.js, Nest.js, REST APIs, WebSockets (Socket.io), Serverless, Edge Functions

AI & LLMs: OpenAI, Anthropic, Gemini API, RAG (Retrieval-Augmented Generation), Prompt Engineering

Automation (BPA): n8n, Make, GoHighLevel, Google Workspace integrations

Databases: PostgreSQL, MongoDB, MySQL, Supabase

Testing: Jest (Unit Testing), Cypress (E2E Testing)

DevOps & Tools: Git/GitHub, GitHub Actions (CI/CD), Docker, Vercel, Figma, Jira

Methodologies: Agile, Scrum, Code Reviews, Pair Programming

PROFESSIONAL EXPERIENCE

Urpe AI Lab / Urpe Integral Services

Jul 2025 – Present

Full Stack Developer & AI Automation Specialist

Design and build AI-powered web platforms for the group's immigration law firm (Urpe Integral Services) and for external B2B clients. Technically lead delivery alongside a mid-level developer on the team.

- Built the internal operations platform of an immigration law firm serving **40 active users** across leadership, operators, analysts, and the sales team, integrating visa case management, automatic USCIS form generation, AI-driven eligibility analysis, and a dedicated client portal. Internal processing and deliverable preparation went from **6 months to 1 business week**, scaling from ~10 to ~48 cases processed per month and positioning the firm as a more structured solution than the competition, which boosted the sales team's conversion.
- Designed the platform's technical architecture on Next.js, TypeScript, and Supabase, with more than **20 specialized modules** (legal library, eligibility templates, case comparator, AI-driven deliverable generation, AI-assisted drafting, audit logs, payment management, and schedule management).
- Integrated generative AI services (OpenAI, Anthropic, Gemini API) and Google Workspace to automate client profile analysis, legal document drafting, and operational communication with visa candidates.
- Deployed AI conversational agents on WhatsApp Business, Instagram, and Facebook Messenger handling a pipeline of **~500 monthly prospects**, automating lead capture, initial customer service, and qualified handoff to the sales team.

- Built an advanced personalized email marketing system that leverages the context of each client—AI agent conversation to generate tailored follow-ups. Over a base of ~2,700 monthly prospects and more than 19,700 emails sent, it achieved a **49% open rate** (nearly double the industry average).
- Delivered custom dashboards and web products for external clients: AI agent management and configuration panel, team performance control panel, and an AI-assisted rapid landing page generation system for multiple B2B clients.
- Orchestrated end-to-end automation flows in n8n and GoHighLevel connecting multichannel messaging, CRMs, and databases to eliminate repetitive manual tasks across internal operations and external client services.

Nolatech

Aug 2021 – Mar 2025

Junior Front-End Developer → Mid Full Stack Developer (Feb 2023) → Tech Lead (Mar 2024)

Development consultancy with proprietary products. Promoted twice during my tenure for sustained contribution to client projects and internal product.

- Technically led the front-end web development of **Epale**, a social messaging app with presence on the App Store and a web version (general consumer). Worked with the Product Owner and PM to define and prioritize features for the product and its internal management dashboard.
- Built the web version of Epale with React, Socket.io, and Node.js: P2P and group multimedia chats (audio, video, images), live polls, push notifications, local data persistence, and adaptive optimization of multimedia files based on the user's bandwidth.
- As Tech Lead, led a team of 3 developers applying pair programming, technical blocker removal, and actionable documentation. In the first 2 months leading the team, **tickets closed per sprint increased by 20%** and QA-reported issues were significantly reduced.
- Improved client application performance by **50%** through memoization, lazy loading, code splitting, query optimization, caching, and strategic use of localStorage; achieved high Lighthouse scores and improved initial load experience.
- Increased landing page engagement by **40%** (retention and time on page measured via Google Analytics) through high-impact redesigns and UX improvements.
- Developed multiple admin panels and REST APIs with Next.js, Redux, and SQL/NoSQL databases for content moderation and user management on client projects.
- Standardized team practices by building reusable component libraries, leading code reviews, and promoting pair programming, accelerating onboarding for new developers.

Freelance Projects (Selected)

Dec 2020 – Present

Full Stack Developer

Custom projects in AI marketing automation, operational management, landing pages, and institutional platforms for LATAM clients.

- **Botizate** (Nov 2025 – Apr 2026, part-time): Built a marketing and customer service automation system with WhatsApp and email flows, including conversational agents with RAG memory, automatic lead capture and nurturing, scheduled reminders, and a campaign metrics dashboard. Managed an average of **3,000 clients with a 25% booking rate**, scaling the operational capacity of a business that was previously 100% dependent on human staff.
- **Ultrabodegón**: Built a complete operations management system with Next.js and MySQL: public landing, admin dashboard, inventory control, and tracking of pending orders and deliveries.
- **Custom platforms for organizations**: Developed a project management platform for a non-profit foundation, and an institutional billing system for the Dental Association of Bolívar State (Venezuela).

PERSONAL PROJECTS

Citafy — Co-founder & Technical Lead

In development (MVP)

SaaS for appointment management and confirmation targeting Latin America (initial market: Venezuela).

- Co-founded the project and lead the technical direction. Mapped the complete system (data model, flows, and integrations) and am currently developing the public landing and the first MVP features on Next.js and PostgreSQL.

EDUCATION

Electrical and Electronic Engineering

UNEXPO — National Experimental Polytechnic University “Antonio José de Sucre”

2018 – 2022

Puerto Ordaz, Venezuela · Coursework completed · Thesis pending

CERTIFICATIONS & ADDITIONAL TRAINING

- Web Development School — Platzi (complete path, 2023)
- Advanced Next.js — Fernando Herrera (2025)
- Prompt Engineering applied to LLMs (2025)
- Selected Data Science courses — Platzi

LANGUAGES

Spanish (native) · **English** B1 (reading/writing), conversational fluency in progress
